**ONE EMPIRE OVER MEDIA,  
HEALTH AND EDUCATION**

### THE POWER OF PROPAGANDA AND THE LANGUAGE OF PERSUASION <sup>1</sup>

Nicoletta Dentico

**B**eyond the recent conspiracy theories, on a planetary scale, the icon of philanthropist Bill Gates corresponds to the image of generosity. The optimistic and positive language with which he encloses problems and hurries to administer solutions is an advanced form of magic used to enchant his global audience, and even himself.

Clearly, Bill and Melinda believe that aid storytelling needs to be improved with more success stories and telling progress in some areas of development. It's not for nothing that their philanthropy blog is called 'Impatient Optimists'<sup>2</sup>.

This skilful, symbolic construct is one of the areas of investment that the Bill & Melinda Gates Foundation manages most carefully, funding international newspapers such as NBC Universal, Al Jazeera, BBC, Viacom, to name but the most famous. Less known to the public, is the function of the Gates couple as a behind-the-scenes influencer of international magazines and media, something certainly not secondary<sup>3</sup>.

Clearly, the public cannot fully grasp the collaborations that the Gates Foundation has consolidated with the media and the press through its advocacy and policy programs<sup>4</sup>, and above all, they do not see any trace of them although they are influential and substantial.

The Foundation does not spare resources devoted to the world of information: almost a billion dollars are allocated to forage this powerful consensus machine, which moves in unison with field programmes (health, agriculture, education) and educational and scientific research initiatives. The two scholars Alanna Shaik and Laura Freschi gave an effective representation of this when they wrote that we are in a situation where we might find ourselves "reading a story about a Gates-funded health project, written up in a newspaper that gets its health coverage underwritten by Gates, reported by a journalist who attended a Gates-funded journalism training program, citing data collected and analysed by

scientists with grants from Gates."<sup>5</sup>

In particular, the Foundation is interested in promoting partnerships with journalists and newspapers on global health and development agenda issues. The Guardian in English, El Pais in Spanish, National Public Radio and Public Broadcasting Service in America, the African Media Initiative: these are just some of the newspapers and media that have most focused their editorial choices on international issues on the priorities on which the Foundation operates, and which act as a sounding board for Seattle's activities.

An interesting case is the disbursement of \$1 million to Harvard University for the Nieman Fellowship, on the Global Health Reportage, and the HIV Prevention Reporting Fellowship Fund in Sub-Saharan Africa<sup>6</sup>. The type of funding allocated to the press is associated with an impact award.

The flagship initiative, "Innovation in Development Reporting" (IDR), defines the grid for reading reality and the transformative horizon towards which to set the project to be funded. Including the need for specific and measurable objectives to be achieved through media action (article, radio report, video, social media, etc.. ), according to the perspective of the so-called solution journalism<sup>7</sup>, also funded by the Gates Foundation, which aims to catalyse the media focus towards activities that solve problems, with the intention of depolarizing public dialogue and relaunching the Western version of human progress.

So far IDR has funded 185 projects<sup>8</sup>. The result has been a marked increase in the focus on global poverty and public health issues. The narrative threads of this journalistic production generally follow the priorities and the cognitive approach of the Gates Foundation, which generally leads to positive publicity. While journalism, especially in the wake of the wave against racism that rightly pervades the world, would need more diversity and less white supremacy, the Gates Foundation's strategy is, on the contrary, focused on investing in the training of new generations of journalists, particularly in Africa.

The pervasiveness of Gates in journalistic production, increasingly in crisis, is a phenomenon which, because of its problematic nature and conflict of interest, has repeatedly attracted the attention of the Fairness and Accuracy in Reporting (FAIR) observatory<sup>9</sup>.

## MESSENGERS OF GATES' AGENDA: HOW THE CORNELL ALLIANCE SPREADS DISINFORMATION AND DISCREDITS AGROECOLOGY <sup>1</sup>

Community Alliance for Global Justice / AGRA Watch

The Bill and Melinda Gates Foundation (BMGF) has emerged over the past decade as an extremely influential actor in an ever-intensifying battle over the future of food and agriculture, pumping major funding into industrial agriculture while participating in powerful alliances seeking to reshape the trajectory of global governance of the food system. While some of these activities are drawing increasing scrutiny and analysis, this study examines a lesser-known aspect of BMGF's strategy: framing the debates and shaping how issues are communicated, as well as fostering a new generation of leadership to carry forward its mission. Funded by BMGF, the Cornell Alliance for Science (CAS) uses its affiliation with the only ivy league institution that is a land-grant college to claim scientific neutrality while assiduously promoting communications aligned with agribusiness in its use of fellows, especially those from Africa.

*"Entrance to Bill & Melinda Gates Hall, Cornell University, Ithaca, NY", by Kenneth C. Zirkel, is licensed under CC BY-SA 4.0 (<https://creativecommons.org/licenses/by-sa/4.0/deed.en>).*

---

<sup>1</sup> Extracted from: "Messengers of Gates' Agenda: A Case Study of the Cornell Alliance for Science Global Leadership Fellows Program". Community Alliance for Global Justice/ AGRA Watch, 2020. <https://cagj.org/2020/08/new-agra-watch-report-messengers-of-gates-agenda-a-case-study-of-the-cornell-alliance-for-science-global-leadership-fellows-program/>

Housed in Cornell University's College of Agriculture and Life Sciences in Ithaca, New York, the Cornell Alliance for Science (CAS) was launched in 2014 through a \$5.6 million endowment by the Gates Foundation "to promote access to scientific innovation as a means of enhancing food security, improving environmental sustainability and raising the quality of life globally."<sup>2</sup> According to CAS director Sarah Evanega, CAS aims to "depolarize the GMO debate and engage with potential partners who may share common values around poverty reduction and sustainable agriculture, but may not be well informed about the potential biotechnology has for solving major agricultural challenges."<sup>3</sup> A second grant of \$6.4 million in 2017 brought the total contribution of BMGF to CAS to \$12 million. BMGF remains the primary funder of CAS to date, while fifteen additional institutional and individual contributors of \$1000 or more are listed on the CAS website.

CAS describes its main strategies as: a) establishing a global network; b) "training with a purpose"; c) developing multimedia communications on agricultural biotechnology.

These strategies come together through its Global Leadership Fellows Program, a 12-week intensive training course held each year at Cornell bringing together 20–30 young professionals, mainly from the Global South, and particularly Africa. While the geographical reach of the program has been broadening, the majority of fellows – 60.6% in 2019 – were of African origin, in keeping with prior years (See Figure 1). Upon examination of the fellows' affiliations, multiple linkages with BMGF become apparent. Cross checking the fellows' affiliations with grant disbursement data provided on the BMGF website, we can see that 34% of all the African fellows from 2015–2019 were associated with organizations that received funding from BMGF. Together, organizations connected to the fellows received over \$712 million from BMGF from 2003 through 2019.

<sup>2</sup> Cornell Alliance for Science. Our Mission. <https://allianceforscience.cornell.edu/about/mission/>

<sup>3</sup> Shackford, S. 2014. New Cornell Alliance for Science gets \$5.6 million grant. <https://news.cornell.edu/stories/2014/08/new-cornell-alliance-science-gets-56-million-grant>.

The strong overlap between the groups funded by BMGF for agricultural development and the CAS fellows gives additional meaning to the CAS strategy of building a global network, begging the question, *whom does this network serve, and toward what ends?* Given these linkages, it comes as little surprise that there are strong parallels between the types of technologies promoted by BMGF through its agricultural investments and the messages coming from CAS and its fellows – many of whom come from BMGF-backed organizations. In analyzing the work put out by CAS and its fellows, a striking pattern emerges of there being a singular focus and message running throughout almost all of it: an uncritical promotion of biotechnology. Furthermore, in a distortion of scientific methodology, this position is not vetted against any diverging ones. What adds power to the narratives of CAS it is that its messages are not coming from BMGF or from its agribusiness partners directly, but from mostly young, African voices that make up its Fellowship Program, ostensibly informed by their lived experiences and claimed scientific rigor, given the affiliation with Cornell.

Through its funding for the Cornell Alliance for Science, the Bill and Melinda Gates Foundation is seeking to shape public opinion in favor of adopting GMOs and corporate agriculture. CAS is building a new generation of leaders to carry out BMGF's mission of spreading corporate biotechnology across the Global South, particularly Africa. A key communications strategy of CAS is to promote narratives in which biotechnology is equated with 'science' and critique of biotechnology is equated with being 'anti-science.' That the attacks on agroecology by CAS are coming at the same time that there is a mounting global scientific consensus around the merits of agroecology is no coincidence. Studies have demonstrated that perceived scientific consensus is a key factor in influencing public support on a given issue and that this tends to encourage counter-efforts around "the 'manufacture of doubt' by political and vested interests."<sup>4</sup> As momentum continues to build around agroecology, its advocates can be certain that further smear campaigns and other attempts to manufacture doubt will continue. Ultimately, analyzing the Gates Foundation's networks of influence points to the need for the food sovereignty movement to develop robust communication strategies of our own.

### DIGITAL DICTATORS

Satish Kumar

**T**echnology is seductive and a double-edged sword. It can be a useful tool to connect or it can be a brutal weapon to control. If technology is the servant and if it is used with wisdom to enhance human relationships, without polluting the environment and without wasting natural resources then technology can be good. But if technology becomes the master, and human creativity and ecological integrity are sacrificed at the altar of technology then technology becomes a curse.

In the recent past New York governor, Andrew Cuomo, Bill Gates of Microsoft and former Google CEO, Eric Schmidt, have been promoting the idea of transforming face to face learning to a system of education rooted in internet technology and operated by remote control. Thereby, integrating digital technology, fully and permanently, into educational process. And by doing so getting away from the need for personal relationships and intimate interactions between students and teachers. Cuomo, Gates and Schmidt come from a school of thought which subscribes to the theory that 'technology is the solution, what is your problem?'

Unfortunately, these highly 'educated' people do not seem to know the meaning of 'education'. The word is derived from Latin 'educare'. It means to bring forth or lead out or draw out what is potentially already there.

Every human person comes into this world with his or her own unique potential. The work of a true teacher is to observe and spot that special quality in a child and help to nurture it and enhance it with care, attention, and empathy. Thus, the beautiful idea of education is to maintain human diversity, cultural diversity, and diversity of talents through decentralised, democratic, human scale and personalised systems of schooling.

A good school is a community of learners where education is not pre-determined by remote authorities, rather it is a journey of exploration where students, teachers and parents are working together to discover right ways to relate to the world and to find meaningful means of living in the world.

The idea of digital learning through remote control and pre-determined curriculums moves away from the rich and holistic philosophy of education. Digital teaching looks at children as if they were empty vessels in need of being filled with external information. The quality of information or knowledge given to the child remotely and digitally is determined centrally by people who have a vested interest in a particular outcome. And that outcome is largely to turn humans into instruments to run the money machine and to increase the profitability of big corporations.

*Satish Kumar, Gandhi and Globalisation course, Navdanya Earth University*

Such centralised and impersonalised systems of digital education will destroy diversity and impose uniformity, destroy community culture, and impose corporate culture, destroy multiple cultures, and impose monoculture.

When teachers teach remotely, they tend to think as if the children have no body, no hands, and no heart. They have only a head. The information taught digitally is almost entirely of intellectual nature. Thus, digitally educated children are less than half educated. Eating half baked bread gives you indigestion; life of a half-educated person lacks coherence and integrity. A proper education should include the education of the head, education of the heart and education of the hands. In an ideal school community, children learn maths with music, science with spirituality and history with a human touch. Academic knowledge is complemented by the learning of the arts and crafts.

A computer cannot teach kindness. Only in a real learning community can children learn how to be kind, how to be compassionate and how to be respectful. In a school community, children learn together, play together, eat together, and laugh together. They produce plays and perform concerts together. They go on field trips together. It is through these shared human activities that children gain a deep appreciation of life. Education is more than the acquisition of information and facts; education is a living experience. Sitting in front of a computer for hours is no way to learn social skills.

Placing the future of our children in the hands of a few digital giants like Google, Microsoft and Amazon and putting them in charge of educational systems is a recipe for digital dictatorship and opens the doors to disaster. If democratic societies are opposed to military dictatorship, then why should they embrace corporate dictatorship? Through smart technologies these giant corporations will be able to trace and exploit every activity of children and later, when they are adults, through data

manipulation and control. Who wants to embrace such 'dystopia'?

Rather than investing in top down, artificial, sedative, and virtual technology, democratic societies should be investing in people. We should be investing in more teachers in smaller schools, with smaller class sizes and bottom up, imaginative, benign, and appropriate technology.

We have already experienced the way algorithms, artificial intelligence, biotechnology, nanotechnology, and other forms of so-called smart technologies have been used to control, manipulate and undermine democratic values. The techno giants who consider humans as 'biohazards' cannot be trusted with the future of our children. We should be embracing the Green New Deal and not what Naomi Klein rightly condemns as the Screen New Deal.

We need the greening of education rather than the screening of education. Our children need to learn not only about nature but from nature. They need to learn from forests and farming, from permaculture and agriculture, from agro-ecology and organic gardening, from marine life and wildlife. Such knowledge and skills cannot be learned by looking at computer screens.

A computer is a box. It teaches you to think within the box. If you want to think outside of the box, you need to go out into your community, and out into the natural world.

Children need to go out in nature with experienced teachers. Nature herself is the best and the greatest teacher. With the combination of human teacher and nature teacher assisted by a limited amount of internet, children will gain a much more rounded education than through a digitally controlled and centralised system proposed by the techno giants.

Technology has a place in education but let us keep it in its place and not allow technology to dominate our lives and the lives of our children. Technology is a good servant but a bad master.

*Satish Kumar, Gandhi and Globalisation course, Navdanya Earth University*

## PEDAGOGY OF FREEDOM

Satish Kumar

The word 'Education' is derived from Latin 'educare' which means 'to bring up' or 'to bring forth' or 'to draw out'. Thus, education doesn't mean teaching, or schooling or giving of knowledge or even acquisition of knowledge. Education simply means development of the qualities which are already there. Socrates compared a teacher with a midwife who just helps to bring forth the child.

I compare a teacher with a gardener or an orchard keeper. The tree is already in the seed. The seed knows what kind of tree it is. The gardener doesn't put a tree in the seed, only helps the seed to become a tree. The gardener may find a piece of good soil to plant the seed, put good organic compost to nourish the seed, put a fence to protect the seed, give water to nurture the seed, but a gardener never tries to change an apple seed into a pear tree.

Parents and teachers need to be like gardeners. They need to observe their children, understand them, help them to become who they are, support them on their way to self-realisation. But never try to impose on them their idea of an "educated person".

In our modern Industrial Age education has become confused with training, schooling or acquisition of facts, information and knowledge in order to get a job. Rather than a teacher helping a pupil to become who he or she truly is and realise his or her true potential, a teacher has become a technician or a trainer or even an agent to meet the needs of the market. The teacher is paid to mould the child so that he or she is fit to make a success of the economy. In this kind of educational system, the market and the economy become the masters and the human beings become servants.

This corruption of education worried J. Krishnamurti. When I first met him on the banks of River Ganga in Varanasi, in 1960, he said to me, "I want to recover the original and actual meaning of the noble word 'Education'. I want schools and teachers to return to the true meaning of the word and dedicate themselves to the cause of helping young people to discover their vocation."

Krishnamurti further said to me, "there is nothing wrong with the market or with the economy. As long as they serve the needs of humans, they have a place in the world. But when humans are required to serve the needs of the market and the economy then we are in real trouble. Unfortunately, that is the problem at this moment in the world. This is why we need a total revolution in our idea of education."

"I understand the etymological meaning of the word, education," I said "But do you have something more to say about it?" "I asked.

"Yes, I do. I want to say that we need to liberate ourselves from the idea that education takes place only within the four walls of a school. It is not that you read a book, go to a classroom for your lessons or pass an examination and then you have finished with your education. Education is a life-long process. From the moment you are born to the moment you die you are in the journey of learning," said Krishnamurti.

"What exactly are we trying to learn during this journey of life?" "I asked.

"We are learning to be Free! Learning is all about liberation. We need to learn to be free from fear, free from anxiety, free from dogmas and doctrines. We need to discover and rediscover that we are born free and freedom is our birth right! Fear is a conditioning of the mind. From our family, from our religious belief, from our media and even from our educational systems we are conditioned to fear. The purpose of true education is to free us from all kinds of fears."

For me this was a new Pedagogy of Freedom!

But our educational system at present is totally unaware of the fact that it is based on the Pedagogy of Fear!

Since that meeting with Krishnamurti, I have keenly observed and realised that schools and universities around the world seem to look at their students and think of them as if they have no bodies! They have no hands, no hearts, no senses, only brains. All education is focused on the education of heads only. No wonder that many of our young people feel inadequate, incompetent and fearful. They have never developed their heart qualities. They don't know how to relate to other people and to the natural world. This lack of emotional and spiritual intelligence is a major cause of fear. The usual educational curriculum includes almost nothing about compassion, about a sense of service, about courage or about love! These qualities should be cultivated during the time we are being educated.

Most educated people not only lack this spiritual and emotional intelligence, they also lack body-intelligence. The curriculum also ignores all practical or physical skills. Most undergraduates or postgraduates coming out of Universities know nothing about growing food, nothing about building a house, nothing about mending or repairing and almost nothing about cooking. They have highly trained heads superbly capable of complaining, comparing, criticising and strong desire to control and consume. They have little or no capacity for making, producing, building or creating. There is very little in our educational philosophy or practice which promotes self-reliance and self-confidence.

On top of this deficit in emotional intelligence and body-intelligence the current educational system is more or less indifferent to the development of the imagination. Music, art, dance, plays, poetry and philosophy are relegated to some distant and specialist corners. Instead of the Arts being an integral part of everyday life they have been exiled to museums and art galleries to be pursued by a small minority of celebrities and marketed as commercialised commodities, or practiced by a small number of struggling idealists, who can hardly make a living.

The educational system produces millions upon millions of young people to serve the needs of machines, markets and money. And all these young people are struggling to compete and succeed and are often afraid of not succeeding.

This fear of failure is one of the most detrimental aspects of the current Pedagogy.

In order to compensate for this fear of failure, young people are encouraged to seek success for themselves; seek bigger salaries, bigger cars, bigger houses and higher positions with higher expectations. Some succeed, but many fail. This ego-centric rat race results in family breakdown, mental breakdown, discontentment, depression and disappointment.

J. Krishnamurti was pained to see such a state of degradation in education. He called education a noble word which is misunderstood and misused. Therefore, instead of just criticising the present paradigm, he established a number of exemplary schools where learning, living and loving are integrated. In these schools we can witness the education of head, heart and hands. I have had the privilege of visiting them and found that teenage girls and boys there are enjoying a holistic approach to learning, based on a Pedagogy of Freedom. I wish these schools would provide a University level of education so that the students don't have to enter into the Pedagogy of Fear after they leave Krishnamurti Schools.

### THE PHILANTHROPIC MONOPOLY OF BILL & MELINDA GATES<sup>1</sup>

Nicoletta Dentico

The Gates Foundation provides more global health funding than any major donor country. Influential newspapers praise Bill and Melinda for the fact that the two have revolutionized public health and the lives of billions of people on the planet<sup>2</sup>. In short, when we talk about Bill Gates as a philanthropist, we are dealing with a story of monopolistic vocation comparable only to the story of Bill Gates as Microsoft's entrepreneur. The style and culture of the company are identical, it is no coincidence that the two have always been intimately linked. Jeff Raikes, Microsoft's key man after Bill Gates, was the head of the foundation and so was Microsoft co-founder Paul Allen, CEO of the foundation until 2013<sup>34</sup>. After all, in the logic of philanthro-capitalism, doing business and doing benevolence are two sides of the same coin. It is reasonable to think that the Foundation, in so far as it promotes a development of the global South inspired by information technology and supported by the intervention of large companies, helps Microsoft. The Foundation helps Microsoft when it puts pressure on national governments to open its doors to the big companies with which it has a privileged relationship - Cargill, Monsanto, Nestlè, Mars, DuPont Pioneer, Syngenta, Bayer, just to mention the ones that recur most frequently in its programs<sup>5</sup>.

**There is no development area in which the foundation does not act as a superpower.**

This subjugation no longer applies only to the constellation of organisations that depend on it for funding, but to a growing number of governments, not only among middle- and low-income countries. For 25 years, the Gates Foundation has held a position of undisputed hegemony with 1541 employees (as of 2017) comprised between its headquarters in Seattle, and seven offices around the world (Washington, London, New Delhi, Beijing, Addis Ababa, Johannesburg and Abuja), and an endowment of 50.7 billion dollars (as of 31 December 2017)<sup>6</sup>. The assets include a donation by Bill Gates, of about 35.8 billion dollars in Microsoft

<sup>6</sup> "Financials." Last modified January 1, 2001. <https://www.gatesfoundation.org/Who-We-Are/General-Information/Financials>

shares (as of December 2019), and the mega-donation of 30.7 billion dollars that was announced at the end of June 2006<sup>7</sup> by Warren Buffet, owner of the holding company Berkshire Hathaway. 83% of the patrimony of the second richest man in the world (Buffet) was destined to the charitable activities of the first billionaire on the planet (Gates)<sup>8</sup>. An ingenious move that would incorporate the Berkshire Hathaway holding company he owned into the foundation's investment apparatus. It was clearly a historic step for Seattle, with Buffet's entry into the foundation and Bill Gates' subsequent decision to leave Microsoft to devote himself full-time to philanthropy<sup>9</sup>.

Since then, the foundation has been structured into two separate entities: the actual Bill & Melinda Gates Foundation, which selects strategic priorities, projects to be funded and allocates funds; and the Bill & Melinda Gates Foundation Trust, which is managed by Buffet and is responsible for managing the Foundation's assets, taking care of investments so as to finance the Foundation's ability to donate. And here's the best part<sup>10</sup>.

Coca Cola	466
Walmart	837
Walgreen-Boots Alliance	280
Group Televisa	433
Liberty Global	221

According to data from the US Government's Securities and Exchange Commission, the assets of the Bill & Melinda Foundation Trust are invested in food and consumer products that are harmful to health and contribute to the chronic disease crisis ( such as cancer, diabetes, heart disease, etc...).

All figures are expressed in millions of U.S. dollars

<sup>7</sup> "Buffett Donates \$37bn to Charity," June 26, 2006.

<http://news.bbc.co.uk/2/hi/business/5115920.stm>

<sup>8</sup> Gates, Bill and Melinda. "Warren Buffett's Best Investment." *Gatesnotes.Com*.

<https://www.gatesnotes.com/2017-Annual-Letter>

<sup>9</sup> "History." Last modified January 1, 2001. <https://www.gatesfoundation.org/Who-We-Are/General-Information/History>

<sup>10</sup> Lee, Jaeah, and Alex Park. "You Won't Believe the Companies Bill Gates' Foundation Invests In." *Mother Jones*, n.d. <https://www.motherjones.com/environment/2013/12/gates-foundations-24-most-egregious-investments/>.

From the records<sup>11</sup>, it emerges that the Gates Foundation Trust's direct investments include the following:

- \$ 466 million in Coca-Cola factories operating south of the US;
- \$ 837 million in Walmart, the largest food, pharmaceutical and alcohol chain in the US;
- \$ 280 million in the Walgreen-Boots Alliance, a large multinational retail drug company;
- \$ 650 million in two television production giants, GroupTelevisa (\$ 433 ml) and Liberty Global PLC (\$ 221 ml).

Furthermore, through Warren Buffet, a quarter of the Foundation's assets are invested in his own holding company Berkshire Hathaway Inc., which holds \$17 billion of shares in the Coca-Cola Company in the United States, and \$29 billion in funds invested in Kraft Heinz Inc., one of the top ten companies in the food industry. As pointed out in a letter from civil society to the WHO<sup>12</sup>, and concerned about the company's dangerous liaisons with the Seattle philanthropist, the Bill & Melinda Gates Foundation is a beneficiary of the sale of products that are subjected to WHO standards and regulations, as well as government policies on nutrition, drugs and health. Bill Gates, Melinda Gates and Warren Buffet form an impregnable trinity that has governed the Foundation since 2006. Those who own wealth are the real dominant subjects, and they wield the hegemony of a class that has freed itself of any counterweight.

## FINANCIALIZATION OF DEVELOPMENT: PHILANTHROPIC FINANCE AND CREATION OF NEW MARKETS FOR THE POOR

**W**e do not have the opportunity to verify the fates of the "human promises" sown in the different communities across the planet, as foundations are not particularly fond of independent external evaluations. However, we do have evidence of a promise that the foundation "catalyses" with increasing vigour.

A twofold promise. First, that of expanding the horizons of investors, drawing them into unknown territories of global health such as forgotten diseases or the health markets of the poorest, with promises of substantial returns on investment and risk reductions - also from these markets a profit can be drawn.

And second, that of making direct investments in multinational corporations, with the aim of involving them in responding to the needs of the poor while enhancing the companies' need for market expansion.

With an agenda that we could define as evolutionary, the Gates perfectly capture the passage of the new phase of capital building, which differs from previous rounds of privatisation and reforms because it aims straight at the financialisation of social dynamics and public services.

It is the international institutions themselves - with the World Bank in the lead - that are paving the way for attractive investment routes and inaugurating the operational trajectories of this acceleration, with the aim of providing private individuals with technical assistance for co-investment initiatives, loans, and guarantees<sup>13</sup>, as well as the testing of new classes of strictly investor-friendly financial instruments, i.e. aimed at reducing the risk of investment, with the use of public funds capable of attracting private financial capital.

This has led to the germination of thematic bonds and new investment categories that include, for example, health bonds (GAVI's International Financial Facility for Immunization<sup>14</sup>), pandemic bonds (such as Ebola Bond<sup>15</sup>) or the more recent forms of impact bonds (such as Cameroon Cataract Performance Bond<sup>16</sup>).

The International Finance Corporation (IFC), the World Bank's private equity

investment arm, plays a central role in this scenario and a recognized leading role, especially in Africa, India and China, to channel private finance into health insurance, medical training and digital technology<sup>17</sup>. According to the IFC specialists themselves, health is one of the most promising areas in terms of investment return<sup>18</sup>; as the representative of a South African fund quoted by Bloomberg explains, "the economic management of HIV/Aids can be very profitable because the treatment involves not only medicines but also nutritional support, and opportunities are guaranteed throughout the entire value chain, from wholesalers to distribution"<sup>19</sup>.

The Gates Foundation is one of the most accredited partners of IFC: it has considerable influence both in the direction and in the selection of projects. Gates is in the Business of Health in Africa group, has invested substantial capital in Africa Health System Management's Investment Fund for Health in Africa, and has undisputed leadership in the controversial Global Health Investment Fund<sup>20</sup>.

This provides the foundation with an unrivalled capacity of acting as a broker of public-private alliances which can transform the sector's financial markets through intermediary investment funds often registered in tax havens such as Mauritius and the Cayman Islands<sup>21</sup>. The foundation also manages to intervene at the regulatory level in the countries involved, so that companies can operate under legal, as well as fiscal, *laissez faire* systems while having little or no transparency<sup>22</sup>.

The aim is to mobilize the involvement of large companies to design new products or engineer new market models, aimed at poor countries. Gates is convinced that market mechanisms can be put in a position to work well for populations that have no purchasing power. And that, in order to face the problems of the world, it is necessary to intercept the creativity, efficiency and innovative potential of the private sector<sup>23</sup>.

## Taking over Global Health

At the time of Bill's first trip to India, in 1997, and his direct experience with an anti-polio vaccination program, the interest in the field of health grew, and the creation of the Bill & Melinda Gates Children's Vaccine Programme in 1998, to accelerate access to vaccines for children in low-income countries, took shape. The first donation amounted to \$100 million<sup>24</sup>. From there came the activism in the field of global health, as well as the approaches that will characterize the work of the foundation. This was also the starting point for the financial pressure aimed at directing international political consensus towards technical solutions.<sup>25</sup>

The Global Alliance for Vaccine Immunizations (GAVI), was announced with great fanfare at the World Economic Forum in 2000. With an investment of \$750 million over five years, the Seattle-based couple gave birth to a health start-up that would quickly catalyze governments, other major donors, and multilateral institutions. GAVI is the first major creature of Gates philanthropy, of which they are still the largest private investors to date with \$4.1 billion<sup>26</sup>. The birth of GAVI marks the first deviation in global health governance, and heralds the launch of a model of institutional hybridisation that will be unquestionably successful because of the political impetus and resources it will receive from the Gates. The collaboration with other foundations, and with new initiatives that came into being, formed a thick and practically impenetrable embroidery. To the point of unravelling, one piece at a time, the old fabric of classical multilateralism, which arose on the ashes of two world wars, and on the human rights value framework.

## The Global Alliance for Vaccine Immunization: the debut of the public-private model in health

The Global Alliance for Vaccine Immunizations (GAVI) is an independent public-private partnership that aims to "save the lives of children and protect people's health by increasing vaccination coverage programs in poor countries"<sup>27</sup>. Established in 1999, GAVI was launched in Davos in January 2000 with the adhesion of multilateral entities such as WHO, UNICEF and the World Bank. Its headquarters is located in Geneva. Since 2000, 16 billion dollars have been invested in 76 low and middle-income countries to strengthen vaccination campaigns, with the aim of increasing the sustainability of national programmes and, above all, conforming national markets to the relaunch of vaccines and other immunization products. GAVI has received a total of \$18 billion from funders (June 2019). 79% of the funds came from a core group of northern donor governments - the United States, the United Kingdom, Norway, Germany, Canada, Sweden, Italy and the Netherlands - recently followed by Greece.

<sup>25</sup> "Bill and Melinda Gates Announce a \$100 Million Gift to Establish the Bill and Melinda Gates Children's Vaccine Program." Last modified January 1, 2001. <https://www.gatesfoundation.org/Media-Center/Press-Releases/1998/12/Bill-and-Melinda-Gates-Childrens-Vaccine-Program>

<sup>26</sup> "The Bill & Melinda Gates Foundation." <https://www.gavi.org/investing-gavi/funding/donor-profiles/bill-melinda-gates-foundation>

<sup>27</sup> "Strategy." <https://www.gavi.org/our-alliance/strategy>

The largest private donor remains the Gates Foundation, which alone covers 20.8% of the budget. For the five-year period from 2021 to 2025, GAVI had planned to raise \$7.4 billion<sup>28</sup>. But on the basis of Covid19, the refinancing conference held in London at the beginning of June 2020, mobilized a much higher amount, \$8.8 billion, with which GAVI - it was declared - will be able to immunize 300 million children against 17 infectious diseases in over 50 more fragile and developing countries<sup>29</sup>.

Despite the result of an objective and significant increase in the number of children with vaccine coverage - between 2000 and today, according to institutional communication, GAVI and its partners have immunized more than 760 million children, and saved 13 million lives - GAVI has been criticized by accredited scholars and civil society researchers as the most accomplished expression of the so-called "Gates approach" to health challenges. What exactly does that mean? We are referring to the choice to fund vertical programs for specific diseases, with individual interventions (vaccines) that are not supported by actions to strengthen health systems. In 2005, in response to these criticisms, GAVI inserted an operational window dedicated to health systems, a move that did not fully convince the analysts considering the scarcity of funds (only 10.6%) addressed to this purpose<sup>30</sup>. In addition, by "health system" GAVI mostly means the creation of "health markets" to stimulate the purchase and inclusion of new vaccines, with a preference for adjustments imposed from above and easily measurable<sup>31</sup>.

Through GAVI, the Bill & Melinda Gates Foundation strongly promotes the financialisation of health. In its 20 years of operation, GAVI has been the conceptual cradle of new financial incentives for the pharmaceutical industry to research and develop new vaccines for people living in low and low-middle-income countries. GAVI's programs exclude middle-income countries, which is a major concern. Among the main financial mechanisms put in place are the vaccine bonds of the International Financial Facility for Immunization (IFFIM) and the Advanced Market Commitment mechanism. An incentive that has given rise to a number of bellyaches because of the massive subsidy of public development aid investments to pharmaceutical multinationals (Pfizer and GlaxoSmithKline) for the production of anti-pneumococcal vaccines, with a final price negotiated without any transparency. Which is definitely high for low-income and lower-middle-income countries<sup>32</sup>.

## The philanthropic epidemic: how to donate to control global health

With the ability to invest great personal wealth and enjoy maximum media visibility in the global circuits that matter, the Gates foundation wisely handles the tools of consensus in the world of global health. Beyond the insistent narrative about Bill and Melinda and their common principles, and the obstinate personalisation of the battle for the health of the poor, one cannot overlook the juncture of opportunities which, like a propitious wind, swells the sails of the Seattle couple. The financial disengagement of Western governments towards the United Nations, in the aftermath of the Cold War<sup>33</sup>, opened up boundless maneuvering space for Bill and his wife's optimistic activism in the field of international health. The finances of the WHO were increasingly uncertain - in the two-year period of 1990-91 when voluntary funds exceeded for the first time the regular payment due from the compulsory quotas of the Member Countries, which several countries suspended altogether (the United States, for example, refused to pay its accumulated debts)<sup>34,35</sup>.

Following the merciless plans to cut social spending, which were imposed as a condition for lending to poor countries, the World Bank decreed a health reform strategy which aimed at promoting the private sector and generating markets<sup>36</sup>. In the meantime, the international negotiations that resulted in the World Trade Organization (WTO) had definitively fenced off health as a variable of the economy. In the ascending phase of globalization, the countries of the South of the world had to cope with the onset of a number of infectious diseases without a chance: one among all, but not the only one, the HIV/Aids virus. Bill &

---

critique\_MSF-AC.pdf

<sup>33</sup> In the 1990s, the WHO suffered the reduction of compulsory contributions from Western governments, which directed their funding towards voluntary approaches, and for programmes chosen by the governments themselves, so as to reduce the operating margin of the WHO. The downturn in funding is counterbalanced by an important shift in the political scenario. The World Bank takes the lead over the WHO as a multilateral actor entitled to set strategies and provide funding for health in low- and middle-income countries. The World Bank's framework for action is consistent with the structural adjustment plans imposed as a condition for new development loans, and the provision of guarantees to make debt payments sustainable. In those same years the WHO was subjected to an unprecedented invective by the British Medical Journal, which recognized the United Nations agency's limited scope of intervention to health security and the control of infectious diseases on a scale. See in this regard: Godlee F., "WHO in retreat: is it losing its influence", in *BMJ*, December 1994, 309, pp. 1491-1495, <https://www.bmj.com/content/309/6967/1491.full>; Godlee F., "The World Health Organization: WHO at country level: a little impact, no strategy", in *BMJ*, December 1994, 309, pp. 1636-1639, <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC2542000/>; Godlee F., "The World Health Organization: WHO in crisis", in *BMJ*, November 1994, 309, pp. 1424-1428, <https://www.bmj.com/content/309/6966/1424>

Melinda Gates fit into this gap<sup>37</sup> and filled the void left by governments' civil services. Their intervention, whether we like it or not, brought health back onto the international political agenda thanks to an injection of funds that first sprinkled the non-profit world, then think tanks and political analysis institutes, universities and public institutions (including, as we shall see, the World Health Organization)<sup>38</sup>.

Bill Gates had no difficulty in establishing himself as the Pied Piper of global health<sup>39</sup>. He created an increasingly complex and diversified constellation of public-private initiatives<sup>40</sup> to "harness advances in science and technology to save lives in developing countries"<sup>41</sup>, which allowed him to interface comprehensively with the scientific community, non-governmental organizations, and international institutions.<sup>42</sup> <sup>43</sup>. He then invented new management systems for the health alliances he created and new financing mechanisms for the initiatives in which he participates as a major or almost exclusive funder (color light purple in the diagram below).

<sup>40</sup> As of December 2019, the Bill & Melinda Gates Foundation is reported to support more than 30 public-private initiatives in the field of global health. From the foundation's website: <https://www.gatesfoundation.org/how-we-work/quick-links/grants-database#q/k=Public-%20private%20partnerships%20in%20global%20health&page=2>.

<sup>41</sup> [www.gatesfoundation.org/what-we-do](http://www.gatesfoundation.org/what-we-do).

<sup>42</sup> Ibid.em

<sup>43</sup> Ibid.em

The public-private alliances represent Bill Gates' Trojan horse, the influence area where the operating methods open the floodgates to the corporate sector (which Gates personifies) in the field of health and global development.<sup>44</sup>.

With its new and central role, the Gates Foundation is overtaking even the Rockefeller Foundation with this change of scene, proceeding swiftly to the fideistic privatization of health with the blessing of the international financial organizations, as well as the protection of patents on pharmaceuticals for poverty-related diseases.

The Global Fund against HIV/Aids, Tuberculosis and Malaria, launched at the G8 in Genoa in 2001 and inaugurated as a private law entity in Switzerland in 2002, is the most disruptive of these new initiatives, was created to accelerate the efforts to combat the three pandemics that draw the attention of the international community. The Global Fund took its first steps by making use of the expertise, logistical and administrative structures of the WHO, which were essential to launch programmes in the countries of intervention<sup>45</sup>, but its intended aim was to dynamise or bypass the fossilised procedures of the United Nations<sup>46</sup>. Its creation served, among other things, to channel (if not divert) the transnational civil society movement which, since the Seattle summit in 1999<sup>47</sup>, had vigorously contested the intellectual property regime produced by the WTO agreements, which represented an insurmountable obstacle to access to life-saving medicines in low and middle-income countries<sup>48</sup>. Especially in Africa: the withdrawal of 39 pharmaceutical companies that had taken legal action against Nelson Mandela's South Africa<sup>49</sup>, after the mobilisation of African patients, was a first resounding

<sup>44</sup> Birn AE, "Philanthrocapitalism Past and Present; op. cit. , p. 27.

<sup>45</sup> According to authoritative WHO representatives interviewed during the years of my work with Doctors Without Borders in Geneva, the creation of the Global Fund was a very hard and debilitating blow for the UN health agency. The attention of governments and funders was diverted to this new reality, often in competition with the WHO, albeit illegitimately, given that the Global Fund has a much more limited and agile governance structure and a much narrower operational mandate, limited to funding the fight against 3 diseases. Incredibly, UNAIDS and the WHO sit on the board of the Global Fund, but without voting rights. Private sector investors, including pharmaceutical companies and philanthropic foundations, instead have the right to vote.

<sup>49</sup> Towards the end of his term of office, Nelson Mandela had pushed the South African government to adopt a new law on pharmaceuticals that would introduce all the safeguards of the WTO Agreement on Intellectual Property and pave the way for greater access to essential therapies (Medicines Act, 1997), especially in the areas of HIV and tuberculosis. At that time, South Africa was the country with the highest prevalence of HIV-positive people in the world, and the highest level of multi-resistant tuberculosis to treatments available. The launch of the Medicines Act in 1997 led to the immediate opposition of 39 pharmaceutical companies, which filed a controversial lawsuit against the South African government that lasted until 2001. When the Chief Justice of the South African Supreme Court asked the pharmaceutical companies to show their budgets to demonstrate the damage the law would do to them, the companies unanimously decided to withdraw from the

victory against the abuse of big pharma, but it was also a wake-up call for the private sector and the Western countries that supported it. Non-governmental organisations had to be involved, and financed, as they promised a technical solution to the problem<sup>50</sup>.

It cannot be said that this clever strategy did not work, and that it did not succeed in generating the adhesion to the Global Fund by large segments of international civil society. The new financial flow was aimed at organizing health programs that were increasingly separate from those of the WHO, around biomedical solutions in the fight against disease. Solutions that bring a substantial handful of industry representatives into the governance structures of new health initiatives, as well as the tendency to propose substantial subsidies to companies, incentives for the development and procurement of essential medicines and the stipulation of private contracts, which are by their very nature not easily accessible<sup>51</sup>.

As a result of pressuring vaccines as a solution to the problems of the poor, perhaps the most important question that arises is the chain of public responsibility in health, and in particular the autonomy of the WHO<sup>52</sup>.

Under pressure by Gates' activism and by competition from private-public health alliances that had never been seen before, the WHO - already weakened by the beginning of the new millennium - found itself operating in the field of health policies as an old tool of 20th century multilateralism. In a scenario dominated by fierce competition for visibility in the international community, the WHO soon had to deal with the prospect of gradual marginalization, preliminary to its occupation as a public body. Because, while traditional billionaires only need to buy an island to be happy, Bill Gates aimed to buy an entire UN agency. He is succeeding, but what is even more severe is that the international community is allowing him to do so. The disruptive effect of the Gates Foundation on the budget of the WHO is

---

case in 2001. It was estimated that if the Medicines Act had not been challenged in 1997, it would have saved the lives of 700,000 people in the four years of the trial. See in regard: Dentico N., "Globalizzazione e accesso alle cure: un'insolente storia di apartheid sanitario: Il ruolo delle industrie farmaceutiche, le responsabilità dei governi", in *Salute e Globalizzazione: primo rapporto dell'Osservatorio Italiano sulla Salute Globale*, La Feltrinelli, Milano, 2004, pp. 180-181.

<sup>50</sup> Legge D., "Protecting the right to health through action on the social determinants of health", presentation at an event on the eve of the World Conference on Social Determinants of Health, 18 October 2011, Rio de Janeiro, Brazil.

<sup>51</sup> Doctors Without Borders has carefully monitored and taken a position several times on specific features of the public-private partnerships created by the Gates Foundation. In particular, it focused its attention on GAVI, highlighting the need for transparency in the negotiations between GAVI and the pharmaceutical companies in relation to the price of vaccines. It stressed the oddity of the presence on the Boards of Directors of health initiatives such as the Global Fund and GAVI of representatives of multinationals that derive industrial benefits from the operational choices of these entities, which they are able to influence directly. The GAVI Board of Directors, for example, provides for the presence of 9 independent representatives on the board, people "without professional connections to the work of GAVI", but the people chosen come exclusively from the financial sector, audit firms, banks. See Martens J. E Saetz K., op. cit. p. 30.

<sup>52</sup> People's Health Movement, Medact, Third World Network et al., "Money talks at the World Health Organization", in *Global Health Watch 4: An Alternative World Health Report*, Zed Books Ltd., London, 2017, pp. 245-262.

mainly due to the unwillingness of the Member States to finance the institution, leaving it with freedom of manoeuvre on the use of money, which could be allocated to long-term programmes of the agency, whether on prevention or on important but neglected areas of intervention. Because of the reduction in government funds, further aggravated by the financial crisis of 2008, the WHO had to make cuts, laying off almost a third of its most qualified staff in 2009. While in subsequent years, halving the amount of funds allocated to health emergencies, just when the Ebola virus was spreading along the caravan routes of Africa, devastating four countries on the West Coast.

In the two-year period of 2010-2011, the Gates Foundation paid over \$446 million to the WHO, which was more than any other government contributor after the United States: a figure 24 times higher than the contributions made by Brazil, Russia, India, China and South Africa (the Brics countries) combined<sup>53</sup>. In 2013 it settled as the first absolute donor (in front of all governments) and as the first voluntary donor in 2015<sup>54</sup>. At the end of 2017 it is in second position with over 600 million dollars (11% of the total budget)<sup>55</sup>, and not counting the flow of funds to the WHO from Seattle through GAVI and other public-private entities.

To sum them all up, it is to be suspected, with some reasonableness, that the Gates have held the golden share of the organization's funding for nearly a decade now. That is why it should come as no surprise that the Gates Foundation's priorities have gradually become the priorities of the WHO. Against all scientific evidence, the polio eradication program - which has always been a U.S. priority and is widely supported by the Gates Foundation - is the lion's share of the 2016-2017 budget of the WHO (35.2% of the budget). This item has been boosted in the 2019-2023 budget<sup>56</sup>, with the effect of diverting even more funds from more pressing health priorities - in 2017, there were 22 polio cases worldwide<sup>57</sup> - as well as triggering poor management at the WHO, which is forced to use the polio program to pay nearly 20 percent of WHO staff at about 1300 people<sup>58</sup>.

## The Gates Foundation and the production of scientific knowledge

Another critical issue concerns the interference of Gates funds in the production of scientific knowledge and literature. The subjection of the research community to the foundation's priorities in the health sector - a syndrome that reproduces itself in the selection of funding areas in the field of agriculture - is now an established fact. We know that several members of the scientific community, when the microphones are off, criticize Bill Gates harshly for his obsession to impose the Silicon Valley business model on health care and his unconditional preference for technology.<sup>59</sup>

When the Gates Foundation swoops in on a disease, it has no difficulty in soliciting the commitment of governments and other philanthropic entities to the cause, and in redesigning the world's research agenda.

This is what happened with polio. In 1988, the WHO had undertaken a commitment to eradicate polio by the year 2000, thereby drastically reducing the number of cases but missing the target. Sensing the opportunity, Bill Gates invested more than \$3 billion since 2003 on polio, only to become the largest funder of eradication programs. This included the WHO, UNICEF, and the Centre for Disease Control (CDC) in Atlanta in 2008.

This process enabled him to relaunch the elimination approach on other diseases as well. Malaria is a typical case. The Gates began to take an interest in malaria, and to fund research projects, first by revitalizing activities against the disease and then with the precise intention of changing the strategy of the international community. At the foundation's forum in 2007, Melinda Gates left the scientific community working on malaria astonished, challenging the control strategy and launching the commitment to eradicate the disease<sup>60</sup>.

Despite the scepticism of many researchers, convinced that the elimination of malaria was a project destined to fail, the Gates began to inject so much money - a billion dollars in research projects by 2007 - into this goal so as to silence the scientific community, with few exceptions.

Without consulting her experts, WHO director Margaret Chan immediately adhered to the Gates strategy, but at the beginning of 2008 the authoritative voice of Kochi Arata, head of the malaria programme at WHO, expressed his disagreement in a note to Chan.. Arata complained in that note about the growing domination of the Gates Foundation in malaria research, a dominion that according to him was challenging the necessary diversity of approaches and opinions of the scientific community, and threatened to undermine the leading

<sup>60</sup> Roberts, Leslie, and Martin Enserink. "Did They Really Say ... Eradication?" *Science* 318, no. 5856 (December 7, 2007): 1544–1545, <https://www.ghdonline.org/uploads/1544.full.pdf>

role of the WHO<sup>61</sup>. This bold stance was intended to alert the WHO about the fact that the flow of money from the Gates Foundation, "though crucial, could have long-range, largely undesirable consequences" because it ended up "capturing the world's best malaria scientists in a single 'cartel'", so that "everyone has a vested interest in safeguarding each other's research [...] and the result is that independent review of the scientific evidence is becoming increasingly difficult". In this way, the creativity of research was damaged, something that "could have dangerous consequences for decision-making on global health policies"<sup>62</sup>. Margaret Chan unfortunately decided to liquidate Arata shortly after this episode, and at the WHO there have been no more explicit voices of criticism of the Gates Foundation's role in the field of malaria since Arata's removal. Bill and Melinda are thus given a technical role.

But they are also granted an almost salvific profile in institutional bodies: in ten years, the WHO has invited Bill & Melinda Gates three times to open the World Assembly in Geneva (in 2005, 2011 and 2014)<sup>63</sup>. A symbolic repetition that contributes to validate the model of public-private initiatives conceived in Seattle as the only way to stay with some entitlement on the scene<sup>64</sup> and not be marginalized.

Not everyone got adjusted to this. In the same period of the malaria querelle, two South African researchers published in the prestigious journal *Science* an article that explicitly spoke of "scientific imperialism" of public-private initiatives, which are designed according to a Western cosmology, that completely conditions the strategy of intervention on infectious diseases, that was aimed at eradicating in the most radical disregard of the scientific knowledge and skills of the world's south<sup>65</sup>.

<sup>64</sup> The Gates Foundation has promoted the approach by also supporting evaluation studies on scientific research conducted through public-private partnerships. For example, it commissioned several surveys from McKinsey on the determinants of the effectiveness of partnerships with the private sector. In 2014, it awarded \$7.5 million to Population Services International "to demonstrate the benefits of engaging the private sector to meet India's 2020 family planning goals, and to improve the knowledge of key Indian influencers and policy makers about the need for efficient public-private alliances in the field of family planning", in Marten J. e Saetz K., op cit., p. 37-38.

## **Gates to a Global Empire**

### **...over Seed, Food, Health, Knowledge and The Earth**

A Global Citizens' Report

© Navdanya International

First edition October 2020

#### **Navdanya Team:**

**Editors:** Vandana Shiva, Caroline Lockhart.

**Additional Research and Editing:** Carla Ramos Cortés, Elisa Catalini, Ruchi Shroff

**Translations:** Elisa Catalini, Carla Ramos Cortés

**Front Cover Illustration:** Federico Zenoni

**Layout:** Elisa Catalini

#### **Authors:**

Vandana Shiva, founder of Navdanya Research Foundation for Science, Technology and Ecology (India) and President of Navdanya International.

Farida Akhter, founding Executive Director of UBINIG, Bangladesh.

Fernando Cabaleiro, Attorney at law (University of Buenos Aires), Naturaleza de Derechos, Argentina.

Community Alliance for Global Justice/AGRA Watch.

GM Watch.

Nicoletta Dentico, journalist, and director of the global health program of Society for International Development (SID).

José Esquinas Alcazar, former Secretary of the FAO Intergovernmental Commission on Genetic Resources for Food and Agriculture and Chairman of the FAO Ethics Committee for Food and Agriculture.

Seth Itzkan, Co-founder and Co-Director of Soil4Climate Inc.

Dru Jay, Coordinator of GeoengineeringMonitor.org, writer and activist in climate justice and Indigenous solidarity movements, based in Montreal, Canada.

Aidé Jiménez-Martínez, MA in Sciences, Director of Regulations of Biosafety, Biodiversity and Genetic Resources, SEMARNAT, Mexico.

Satish Kumar, Founder of Schumacher College, England, UK.

Jonathan Latham, molecular biologist and former genetic engineer. He now edits the website Independent Science News.

Mantasa, Indonesia.

Chito Medina, founding member of MASIPAG (Farmers-Scientists Partnership For Development), and former National Coordinator of the network. Associate Professor of environmental science in a leading university in the Philippines.

Zahra Moloo, Kenya, Investigative journalist, documentary filmmaker and researcher on extractive industries, land rights, conservation and security. ETC Group, based in Montreal, Canada.

Silvia Ribeiro, Uruguay, Journalist, lecturer, writer, and educator on emerging technologies, Latin American Director, ETC Group, based in Mexico City.

Adelita San Vicente, Doctor in Agroecology, Director General of the Primary Sector and Natural Resources, SEMARNAT, Mexico.

Tapsoba Ali de Goamma; Human rights activist; Ecologist; President of the Terre A Vie association; Spokesperson for the Collectif Citoyen pour l'Agroécologie (Citizen's Collective for Agroecology), Burkina Faso.

Jim Thomas, Co-Executive Director and Researcher, focusing on emerging technologies on human rights, biodiversity, equity, and food systems, ETC Group, currently based in Canada.

Timothy Wise, Senior Advisor at the Institute for Agriculture and Trade Policy (IATP).
